

Project — Part 3

CS 205

Due Oct. 27 at 11:55 pm

Your Task

Modify your project so that all I/O is performed within a GUI.

Requirements

1. The GUI should display the name and an image for each room, the exits for the room, as well as lists for the room contents and the player's inventory. A textbox will accept the player's commands. All error messages need to be displayed somewhere in the GUI as well.
2. No output should be displayed to the console.
3. When finished, export your project and submit one copy in GoucherLearn. Your code should be fully commented and your project should contain JavaDoc documentation for all your classes.
